

Readme Farm Tools Pole Shift Applicability

Make your own farm tools and machinery out of car and truck parts. There will be plenty of vehicles around with no roads and no fuel after the pole shift. Some will be able to be made run. A gasoline or diesel engine can be converted to run on wood gas or biogas. Thus the equivalent of tractors can be made. A plow can be made from the frame of a car-truck or forged using blacksmithing technology. Seeds can be saved for planting. The following links give good pictures-details of what is needed to be simulated with existing scroungable parts. The TV show "Junk Yard Wars" made useable items all within a day. You have no time limit. You are limited only by your imagination on how to use what you have.
